MEYER (Z 52) ZOYSIA GRASS For a Beautiful Weed Free Lawn

Our Strain Produced from Foundation Stock

..Meyer (Z 52) Zoysia provides a beautiful green lawn in hot dry summer when other grasses wilt and crabgrass and other summer weeds take over. Will withstand considerable wear; resistant to disease and insects; slow growing and can be cut close. Similar in appearance to Kentucky Blue. A warm season grass, it turns brown as soon as freezing weather occurs. Combined with Merion Bluegrass, it will provide a green lawn the year 'round. Will grow under light shade but not dense shade. Best adapted in areas where ordinary cool-season grasses do poorly in summer.

Establishing a Lawn. Meyer Zoysia seed is not available commercially and must be propagated vegetatively to maintain its desirable characteristics. This is done by planting plugs from Foundation Turf. Two inch plugs planted on one foot centers on a well prepared, weed free seed bed between April and October will produce a solid turf in approximately two years. On an existing lawn, plant plugs on

one foot centers, and it is desirable to clear a large spot in which to set each plug so it can get sunlight. Should normally be clipped at $\frac{3}{4}$ to 1 inch for lawn use.

Fertilization and Liming. At time of establishment apply 30 lbs. 1,000 square feet of 5-10-10 or a similar fertilizer. During first year a light application of nitrogen should be added every 2 to 4 weeks during growing season. After established should be fertilized spring and fall with 20 lbs. of 10-6-4 or similar fertilizer per 1,000 sq. ft. Also desirable to apply 25 lbs. of an organic nitrogen fertilizer per 1,000 sq. ft. during the summer. Unless soil is extremely acid, 75 lbs. of ground limestone per 1,000 square feet applied every 4 to 6 years will be sufficient. Packed in cartons of 50 and 100 plugs only.

HYACINTHS--One of the Earliest Spring Flowers

CULTURE IN POTS. Use any good soil, mixed with sand, potting so as to leave the top of the bulb even with the soil. For a single plant use 4 or 5-inch pot, but the effect will be prettier if several bulbs are planted in a larger pot, and still more effective if all are of one color. Press the soil firmly around the bulbs, but do not pack it underneath. Sink the pot in the earth about 6 inches, covering with soil, choosing a location that is not too wet. For a succession of blooms, bring the first out about December 1st, and every two weeks thereafter, until February 1st. Keep moderately warm and when they begin to bloom, give plenty of water and as much fresh air as possible. Too much heat dries up the flower and shortens the blooming period.

CULTURE IN OPEN GROUND. Any good garden soil will suit. If clay or very heavy, do not cover more than 3 inches, if light, from 4 to 6 inches. Protect with manure, leaves or coarse litter to prevent freezing.

A good turf requires a combination of different grasses. These must be the best turf forming varieties. **Wood's Lawn Grasses** contain only the best of these that have been fully tested in our own and government laboratories. Only those with the highest purities and germination are used. You can depend on "Wood's Quality."

Wood's Dixie Lawn Grass Registered

Grows green in Dixie Sunshine. Ideal for the Southern Coastal Area where most fine grasses perish from summer heat, drought and disease. It contains grasses that thrive during the cold months, with Carpet and Bermuda grass that grow vigorously during hot summers, producing a lawn that stays green and velvety the year 'round. It is the best lawn grass to stand heavy tramping, for steep terraces, for light, sandy, dry or infertile land where other grasses have failed, or where there is no shade.

Wood's Winter-Green Registered

Sow in the fall on established lawns for a vigorous, beautiful green growth all winter and spring, when most grasses are dormant.

HOW TO GROW A LAWN

Sow grass in early spring or fall so it can develop deep roots in mild weather to stand summer heat, drought and weeds. Prepare a good firm seed bed and pulverize the ground 5 inches deep, when not wet; remove stones and roots. On each 100 sq. ft. (10x10), dig in 5 lbs. lime, 5 lbs. fertilizer like Vigoro, and a soil conditioner like **Krilium**, **Peat Moss**, compost, or 5 lbs. of organic plant food like **Sheep Manure**. Don't mix lime directly with fertilizer. Rake smooth.

Broadcast seed evenly; cover lightly with a rake or drag; roll or pat firm; water with fine spray until seed comes up; pull or kill with Weedone buried weed seeds which digging brings up.

Each spring or fall reseed and fertilize with half the above amounts; cut close; rake surface soil loose; broadcast fertilizer and seed, heaviest on bare spots and under trees; roll firm, then water.

Cut regularly when 2½ inches high. Don't cut shorter than 1 inch; don't remove clippings unless long and heavy, they add mulch and fertility; water in evenings in hot, dry spell.

Wood's Emerald Park Lawn Grass

In shady spots Creeping Red Fescue forms a soft velvety sod. Ideal for new or old lawns.

Wood's Coastal Lawn Grass

CULTURE OUT-OF-DOORS. All varieties of Narcissus should be grown in clumps and patches in every suitable spot, and there is not a spot where grass will grow in which Narcissus will not succeed. In planting be guided by the size of the bulb, allowing 4 to 5 inches between small sorts and 6 to 8 inches between large varieties. The bulbs will soon completely fill the space, forming a compact mass, and it is then their flowers are produced the most freely. Plant about 5 inches deep, according to the size of the bulb
